

# COPERNICO MULTIFORMAT

Base from 203cm up to 405cm.

Copernico multiformat is the best performing motorized screen for home cinema. The box contains 2 motors horizontally arranged, one black and the other for projecting. The two fabrics interact and create up to 8 format combinations. The new motors with in-built encoder and dedicated electronic control unit independently operate the movements of the two fabrics. They are activated by the radio-frequency remote control supplied or by any home automation system available on the market. By programming the control unit it is possible to raise and lower the screen and adjust the formats as needed with 5 mm precision.

## SCREEN CHARACTERISTICS

- double motorization with in-built encoders
- up to eight customized formats, five of which are pre-set
- interfaceable with home-automation systems via RS485 port
- infrared and radio-frequency remote control supplied
